

# SOLVING THE INTEGRATION DILEMMA

Our longterm partner Cardialysis faced the challenge of changing their CTMS provider and integrate it with our Marvin EDC.

## Background

Cardialysis is a leading Dutch-based Cardiovascular Research Organization (CRO) seeking a new **Clinical Trial Management System** provider. The selected solution had to integrate seamlessly into Cardialysis' existing eClinical ecosystem, with key requirements including compatibility with our Marvin EDC . Before going live, Cardialysis aimed to thoroughly test and validate the system to **ensure smooth operation across all studies.**

---

## From Selection to Go-Live: Cardialysis' CTMS Implementation with Marvin EDC

We made recommendations from our partner list on who provides a CTMS fitting to Cardialysis needs. We supported during intital talks and integration capabilites with Marvin. In the end we have **built one project team with the new CTMS provider to ideally support our client during the implementation.**

✓ **Seamless integrations**

✓ **Marvin partner network**

✓ **Support from seasoned experts**

✓ **Improved data quality**

# Requirements and Challenges

## Project Oversight

Integrating two different systems can be challenging especially if the providers are located in different time zones. Our customer success team took over the project lead from a partners perspective and supported Cardialysis **getting all information they need** as well as staying on top of the project.

## Creating Test Environment

Before production it was eminent that a proper testing was done. Creating one harmonized testing enviroment with consistent test data was done and our task was to **stay consistent through the entire testing phase.**

## Identifying Issues

For all hickups or bugs it was crucial to identify the break points in the testing phase. Handling three parties and identifying thresholds as well as issue was particular challenging. Cardialysis was in the need of a **fully operational system** without looking for bugs. A thorough plan was in place to address all potential breakpoints and pitfalls such integration brings along.

*“Working with the Marvin team and their partner network enabled us to seamlessly integrate the new CTMS with our existing systems. Their hands-on support and structured approach ensured a smooth transition from selection to go-live”*

Khang Tran, Clinical Operations System Specialist, Cardialysis
